PROFILE SUMMARY

Final-year Computer Engineering student and 6x Hackathon Winner with production experience building backend systems, AI-powered applications, and developer tools. Driven by an interest in designing reliable backend systems and exploring serverless architectures to solve real-world engineering problems.

EXPERIENCE

Qrata – Backend Development Intern

Dec 2025 - Jun 2026

- Built a concurrent candidate ingestion pipeline that reduced manual talent addition time by 95% through automated resume parsing and batched processing.
- Integrated Gmail OAuth after independently securing Google's production approval, replacing shared-mailbox communication with recruiter-owned email workflows.
- Migrated recruiter-facing AI workflows from GPT-3.5 Turbo to Gemini 2.5 Flash Lite, reducing LLM inference costs by 60–70% while improving response quality.
- Introduced Slack-based candidate sharing, enabling real-time collaboration between talent partners and client hiring teams.

PlayTheory Labs – Full Stack Development Intern

Jun 2025 - Oct 2025

- Created a serverless preview pipeline using AWS Lambda, S3, and TypeScript to compile and serve AI-generated Vite applications for live iframe previews.
- Implemented backend services for a web scraping platform with API key management, role-based access control, rate limiting, and single-page and multi-page data extraction APIs.
- Contributed to concurrent endpoint monitoring workflows using Cloudflare Workers, developing early batching strategies for large-scale uptime monitoring.

PROJECTS

TYPIKS – [typiks.vercel.app](#) | React, Cloudflare Workers, Durable Objects, Drizzle ORM, D1, Firebase

Feb 2026

Built Typiks, a real-time multiplayer typing platform featuring ranked matchmaking, private rooms, and an Elo-based rating system. Designed a WebSocket-driven multiplayer architecture using Cloudflare Durable Objects for synchronized game state, matchmaking, and room management, with D1, Drizzle ORM, and Firebase Authentication powering persistence and authentication.

TECHNICAL SKILLS

Languages: C, C++, JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks & Technologies: React, Next.js, Node.js, Express.js, Hono, FastAPI, Tailwind CSS, Prisma, Drizzle ORM

Databases: PostgreSQL, MongoDB, MySQL, Redis, Cloudflare D1, Firebase, Supabase

Cloud & Tools: Git, GitHub, Docker, AWS, Cloudflare, Vercel, Render, Railway, Postman, Swagger, Jest, Supertest

EDUCATION

Fr. Conceicao Rodrigues College of Engineering (Fr. CRCE), Mumbai

Bachelor of Engineering in Computer Engineering (AI/ML Hons) - CGPA: **9.34 (up to Sem 5)**

Expected May 2027

Coursework: Data Structures and Algorithms, Operating Systems, DBMS, Computer Networks

ACHIEVEMENTS

Google GenAI Exchange Hackathon 2025 – First Runner Up

Nov 2025

Built MisIntel for one of India's largest hackathons organized by Hack2Skill and Google Cloud, an end-to-end misinformation detection solution with multimodal and multilingual interface (text, URLs, images, audio, video), transparent reasoning pipeline using ReactFlow, WhatsApp bot integration, and browser extension with real-time page scanning capabilities.
